

Amendment to the Claims:

In compliance with the Revised Amendment Format, a complete listing of claims is provided herein.

1. (Currently Amended) A method of facilitating searching for text of computer programs, said method comprising:

identifying text of a computer program to be searched by a search tool used in debugging the computer program outside of a compile phase of the computer program;

searching for the text by the search tool in a targeted item at a targeted location associated with the computer program;

determining one or more additional items to be searched for the text, said determining using one or more language specific rules of the computer program, wherein the determining is defined by the computer program, and wherein the determining is absent user specification of the one or more additional items; [[and]]

choosing one or more locations associated with the computer program in which the one or more additional items to be searched are to be included, wherein locations not associated with the computer program are not chosen; and

searching for the text by the search tool in at least one additional item of the one or more additional items, in response to said determining and said choosing.

2. (Canceled)

3. (Previously Presented) The method of claim 1, wherein the one or more additional items comprise one or more files.

4. (Previously Presented) The method of claim 1, wherein the one or more additional items comprise one or more classes.

5. (Canceled)

6. (Original) The method of claim 5, wherein the one or more locations comprise one or more directories.

7. (Original) The method of claim 5, wherein the one or more locations are designated by an environment variable used in compiling the computer program.

8. (Original) The method of claim 5, wherein the choosing is based on one or more rules of a programming language of the computer program.

9. (Original) The method of claim 1, wherein the text is referenced by the computer program, but not defined within the computer program.

10. (Cancelled)

11. (Currently Amended) A system of facilitating searching for text of computer programs, said system comprising:

text of a computer program to be searched; and

a search tool used in debugging the computer program outside of a compile phase of the computer program to search for the text of the computer program, said search tool adapted to:

search for the text in a targeted item at a targeted location associated with the computer program;

determine, absent user specification, one or more additional items to be searched for the text, the determining using one or more language specific rules of the computer program, wherein the determining is defined by the computer program; [[and]]

choose one or more locations associated with the computer program in which the one or more additional items to be searched are to be included, wherein locations not associated with the computer program are not chosen; and

search for the text in at least one additional item of the one or more additional items, in response to said determined one or more additional items and said chosen one or more locations.

12. (Canceled)
13. (Previously Presented) The system of claim 11, wherein the one or more additional items comprise one or more files.
14. (Previously Presented) The system of claim 11, wherein the one or more additional items comprise one or more classes.
15. (Cancelled)
16. (Original) The system of claim 15, wherein the one or more locations comprise one or more directories.
17. (Original) The system of claim 15, wherein the one or more locations are designated by an environment variable used in compiling the computer program.
18. (Original) The system of claim 15, wherein the choosing is based on one or more rules of a programming language of the computer program.
19. (Original) The system of claim 11, wherein the text is referenced by the computer program, but not defined within the computer program.
- 20-22. (Canceled)

23. (Currently Amended) At least one program storage device readable by a machine tangibly embodying at least one program of instructions executable by the machine to perform a method of facilitating searching for text of computer programs, said method comprising:

identifying text of a computer program to be searched by a search tool used in debugging the computer program outside of a compile phase of the computer program;

searching for the text by the search tool in a targeted item at a targeted location associated with the computer program;

determining one or more additional items to be searched for the text, said determining using one or more language specific rules of the computer program, wherein the determining is defined by the computer program, and wherein the determining is absent user specification of the one or more additional items; [[and]]

choosing one or more locations associated with the computer program in which the one or more additional items to be searched are to be included, wherein locations not associated with the computer program are not chosen; and

searching for the text by the search tool in at least one additional item of the one or more additional items, in response to said determining and said choosing.

24. (Canceled)

25. (Previously Presented) The at least one program storage device of claim 23, wherein the one or more additional items comprise one or more files.

26. (Previously Presented) The at least one program storage device of claim 23, wherein the one or more additional items comprise one or more classes.

27. (Canceled)

28. (Original) The at least one program storage device of claim 23, wherein the one or more locations comprise one or more directories.

29. (Original) The at least one program storage device of claim 23, wherein the one or more locations are designated by an environment variable used in compiling the computer program.

30. (Original) The at least one program storage device of claim 23, wherein the choosing is based on one or more rules of a programming language of the computer program.

31. (Original) The at least one program storage device of claim 23, wherein the text is referenced by the computer program, but not defined within the computer program.

32-34. (Cancelled)
